

Meet Margaret!

Margaret has a connection to Habitat that crosses state lines. Her brother lives in a Habitat home in her home state of Ohio. She arrived in Texas in 2020, wanting to be near her daughter, Monique, and granddaughter, Annessa, who live in Cedar Creek. She is well acquainted with Habitat's mission to provide safe and affordable homes, and now she can achieve homeownership. She draws security from knowing that all Habitat families undergo the same selection process.

When Margaret first arrived in Texas, she was living with a niece and now resides in a friend's garage apartment, so her two bedroom Habitat home will provide her with more space to enjoy and share with family. She looks forward to decorating her home and really making it hers in the modern style she prefers. She would love a garden to grow fresh food - if there just weren't any bugs!

She enjoys earning her sweat-equity hours by attending the Home Ownership classes. She especially found the 'Home Care & Repair' and 'Caring for Your Yard' classes beneficial and meeting neighbors while working on other Habitat family homes and now, her own home. She did mention that caulking presented some challenges!

When she is not performing her work for Boston Scientific [helping support patients wearing heart monitors by hooking them up and making sure the critical data is transmitted], she likes being outside - walking along the Woodlands Waterway paths, outdoor concerts at Cynthia Woods Mitchell Pavilion, brunch with friends, swimming, and other recreation activities. She is discovering many amenities being added to our part of Montgomery County.

Congratulations, Margaret, and welcome to Cedar Creek!
